1. Find the area of the planar region bounded by the curve $y=e^x+2,$ and the lines x=0, x=2, and y=0

Notice that y(0) = 3 and is increasing on [0, 2]. So, to compute this we are going find the integral of y - 3, and then add the rectangle spanned from $[0, 2] \times [0, 3]$.

Thus we have

Area =
$$\int_0^2 (e^x + 2) - 3 \, dx + (2)(3) = (e^x - x)|_{x=0}^2 + 6 = e^2 - e^0 + 2 + 6 = e^2 - 7$$

2. Compute the area.

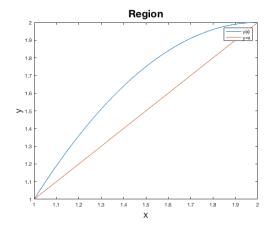

a) Region bounded by $y = -x^2 + 4x - 2$ and y = x.

These two curves intersect at

$$-x^2 + 4x - 2 = x \iff 0 = x^2 - 3x + 2$$

Which has solutions x = 1 and x = 2. Moreover, plugging in x = 1.5 we see that the first plot is on top. Thus we need to solve the integral

$$\int_{1}^{2} -x^{2} + 4 - x \, dx = \int_{1}^{2} -x^{2} + 3x - 2 \, dx = \left. -\frac{1}{3}x^{3} + \frac{3}{2}x^{2} - 2x \right|_{x=1}^{2} = -\frac{8}{3} + 6 - 4 + \frac{1}{3} - \frac{3}{2} + 2 = -\frac{1}{3}x^{3} + \frac{3}{2}x^{2} - 2x \Big|_{x=1}^{2} = -\frac{8}{3} + 6 - 4 + \frac{1}{3} - \frac{3}{2} + 2 = -\frac{1}{3}x^{3} + \frac{3}{2}x^{2} - 2x \Big|_{x=1}^{2} = -\frac{8}{3} + 6 - 4 + \frac{1}{3} - \frac{3}{2} + 2 = -\frac{1}{3}x^{3} + \frac{3}{2}x^{2} - 2x \Big|_{x=1}^{2} = -\frac{8}{3} + 6 - 4 + \frac{1}{3} - \frac{3}{2} + 2 = -\frac{1}{3}x^{3} + \frac{3}{2}x^{2} - 2x \Big|_{x=1}^{2} = -\frac{8}{3} + 6 - 4 + \frac{1}{3} - \frac{3}{2} + 2 = -\frac{1}{3}x^{3} + \frac{3}{2}x^{2} - 2x \Big|_{x=1}^{2} = -\frac{8}{3} + 6 - 4 + \frac{1}{3} - \frac{3}{2} + 2 = -\frac{1}{3}x^{3} + \frac{3}{2}x^{2} - 2x \Big|_{x=1}^{2} = -\frac{8}{3} + 6 - 4 + \frac{1}{3} - \frac{3}{2} + 2 = -\frac{1}{3}x^{3} + \frac{3}{2}x^{2} - 2x \Big|_{x=1}^{2} = -\frac{8}{3}x^{3} + \frac{3}{2}x^{2} - \frac{3}{2}x^{2} + \frac{3}{2}x^{2} - \frac{3}{2}$$

b1) The planar regionR is bounded by the graph $y=-x^2+4x+\sqrt{x^{17}+1}+2016$ and the graph of $y=x+\sqrt{x^{17}+1}+2018$. Compute the area of R.

These two regions are equal when

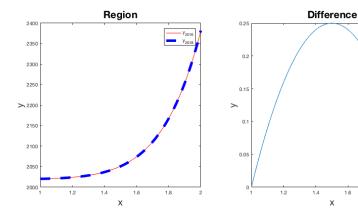

$$-x^2 + 4x + \sqrt{x^{17} + 1} + 2016 = x + \sqrt{x^{17} + 1} + 2018 \iff 0 = x^2 - 3x + 2$$

which has solutions x = 1 and x = 2. Plugging in x = 1.5 we get that the first function is on top. Thus we need to solve the integral

$$\int_{1}^{2} -x^{2} + 4x + \sqrt{x^{17} + 1} + 2016 - \left(x + \sqrt{x^{17} + 1} + 2018\right) dx = \int_{1}^{2} -x^{2} + 3x - 2 dx$$

$$= -\frac{1}{3}x^{3} + \frac{3}{2}x^{2} - 2x\Big|_{x=1}^{2}$$

$$= -\frac{1}{3}(8) + \frac{3}{2}(4) - 2(2) + \frac{1}{3} - \frac{3}{2} + 2 = \frac{1}{3}(8) + \frac{3}{2}(4) - 2(2) + \frac{1}{3} - \frac{3}{2} + 2 = \frac{1}{3}(8) + \frac{3}{2}(4) - \frac{3}{2}(4)$$

- b2) Finally, R is bounded by the graph of $y = -x^2 + 4x 2$ and the lines x = 0 and x + y + 2
- 3. The planar region R is bounded by curves y=x+2 and $x=y^3-2y^2$. Compute its area.

- 4. Compute $\int_{-3}^{3} x \left(\sqrt{x+3} + \sin x^4 + \cos x^3 \right) dx$.
- 5. If $\int_{-1}^{2} f(x) \ dx = 3$ and $\int_{0}^{2} f(x) \ dx = -4$, what is $\int_{0}^{-} 1f(x) \ dx$?
